# INTERPON TEXTURA® POWDER COATING

Interpon Textura® is a highly durable powder coat finish that will protect and extend the life of your window, door or screen frames.

Globally, Interpon Textura® has proven to be popular with both architects and builders alike, due to its unrivalled resistance to marring and scuffing. Interpon Textura®'s distinctive texture lends to a more organic architectural design that's quickly gaining momentum around the world.

Tough against the elements and the likes of abrasion and heat, Interpon Textura® is already a sought-after choice for:

- Fencing
- Shelving
- Racking Systems
- Containers

Featuring a subtle, sand-like texture, Interpon Textura® is a low-gloss, tactile alternative to standard powder coated finishes like gloss, satin or matt. Interpon Textura® colours are identical to non-textured powder coats, with the added benefit of superior durability and resilience.

# DURABILITY TESTING

Interpon Textura® is the new standard for powder coating durability, and it's been put to the test.

When assessed against a non textured powder coat:

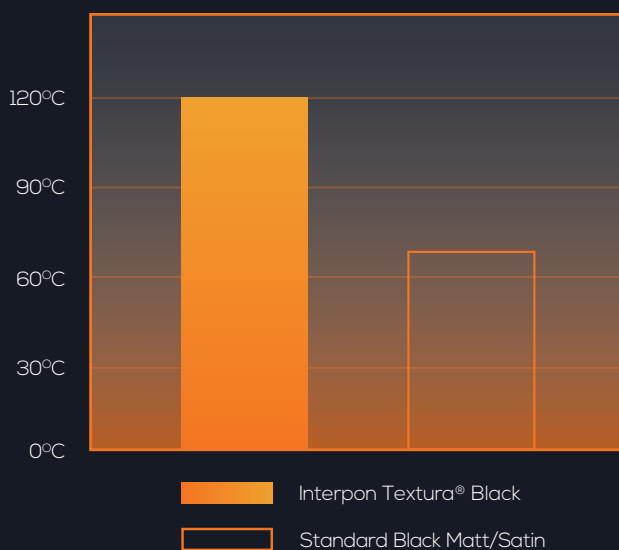

## Test 1:

### Abrasion Resistance Test

Interpon Textura® Black performed

**625x** better in an Abrasion Resistance Test.

625x

## Test 2:

### 1 Hour Heat Wrap Marking Test

When put under a 1 Hour Heated Wrap Marking Test, standard black matt/satin began to bubble and stripe at 70°C. Interpon Textura® Black remained unaffected until **120°C**.

## Test 3:

### Cooling Property Test

Interpon Textura® Black remains on average **2°C cooler** on the surface than the standard black matt/satin when run under a Cooling Property Test (both products placed in a 200 °C oven for 20 mins, and left to cool for 12.5 minutes).

-2°C
